04-01-2021 to 09-01-2021

Organized by
Department of
Mechanical Engineering

ABOUT THE PROGRAMME:

Nanotechnology is the science of studying and producing materials and devices of nanometer size--about the size of a small molecule or individual atom. NIFA manages four grant programs that fund nanotechnology research projects. It also participates on the Nanoscale Science, Engineering, and Technology Subcommittee of the White House National Science and Technology Council and the National Nanotechnology Initiative. As the development of nanotechnology progresses in several disciplines including physics, chemistry, biology and material science, computer scientists must be aware of their roles and brace themselves for the greater advancement of nanotechnology in the future. This chapter has outlined the development of nanotechnology. It is hoped that this gentle review will benefit computer scientists who are keen to contribute their works to the field of nanotechnology.

A One Week ADD ON PROGRAMME ON “ADDITIVE MANUFACTURING MODELING AND SIMULATION TECHNIQUE”

24.05.2021 to 29.05.2021

Organized by

**Department of
Mechanical Engineering**

ABOUT THE PROGRAMME:

Additive manufacturing is the process of creating an object by building it one layer at a time. It is the opposite of subtractive manufacturing, in which an object is created by cutting away at a solid block of material until the final product is complete, 3D printable models may be created with a computer-aided design (CAD) package, via a 3D scanner, or by a plain digital camera and photogrammetric software. 3D printed models created with CAD result in relatively fewer errors than other methods. Errors in 3D printable models can be identified and corrected before printing. The manual modeling process of preparing geometric data for 3D computer graphics is similar to plastic arts such as sculpting. 3D scanning is a process of collecting digital data on the shape and appearance of a real object, and creating a digital model based on it.
