

Public Visibility:

Despite having various biodiversity initiatives in place within the campus most of the campuses lack the visibility of the measures taken in conservation. The study will create awareness & visibility of the campus on various conservation measures implemented to the occupants as well as to the visitors.

Also, the organization will gain globally amongst its shareholders for the positive steps taken towards protecting biodiversity.

Conservation of Species:

Due to Urbanization most of the floral species are under tremendous pressure. The need of the hour is to conserve and protect these species. The study would help in identifying such species in the campus which need to be conserved.

AMRN carbon sequestration through plantation

Carbon sequestration through plantation is one of the important steps towards achieving carbon neutrality in carbon footprint calculation of AMRN, carbon sequestration through plantation is considered and due credit has been given.

No. of trees considered for carbon footprint calculation :52 trees

CO2 absorbed by a tree in one year :18 KG

Total CO2 sequestered : 52 trees x 18 KG of CO2/year/
1936 KGS of CO2
